The impact of today's economy has changed the dental landscape and technological advancements have enhanced the practice of dentistry. Chairside CAD/CAM technology is the future of dentistry.

Join us for an overview of the science, clinical indications, materials and techniques of current and emerging technologies. Each participant should walk away with valuable knowledge to benefit their practice.

DR. FRED STANGE

"CAD/CAM allows me treat patients in one day and control the creation process without opening a full dental laboratory."

DR. ROBERT GARELICK

"CAD/CAM is changing the way I do dentistry. I have total control of designing my restorations, and the technology is both fun and exciting."
